| <p><b>Why did the industrial revolution take place in eighteenth-century Britain and not elsewhere in Europe or Asia?</b> In this convincing new account Robert Allen argues that the British industrial revolution was a successful response to the global economy of the seventeenth and eighteenth centuries. He shows that in Britain wages were high and capital and energy cheap in comparison to other countries in Europe and Asia. As a result, the breakthrough technologies of the industrial revolution - the steam engine, the cotton mill, and the substitution of coal for wood in metal production - were uniquely profitable to invent and use in Britain. The high wage economy of pre-industrial Britain also fostered industrial development since more people could afford schooling and apprenticeships. It was only when British engineers made these new technologies more cost-effective during the nineteenth century that the industrial revolution would spread around the world.</p> |

| <p>The prevailing view of industrialization has focused on technology, capital, entrepreneurship and the institutions that enabled them to be deployed. Labour was often equated with other factors of production, and assigned a relatively passive role. Yet it was labour absorption and the improvement of the quality of labour over the course of several centuries that underscored the timing, pace and quality of global industrialization. While science and technology developed in the West and whereas the use of fossil fuels, especially coal and oil, were vital to this process, the more recent history has been underpinned by the development of comparatively resource- and energy-saving technology, without which the diffusion of industrialization would not have been possible. The labour-intensive, resource-saving path, which emerged in East Asia under the influence of Western technology and institutions, and is diffusing across the world, suggests the most realistic route humans could take for a further diffusion of industrialization, which might respond to the rising expectations of living standards without catastrophic environmental degradation.</p> |
