This chapter assesses Karl Marx: His Life and Environment (1939), a book which offers an important snapshot of Berlin's early understanding of topics that he continued to pursue: the nature of Enlightenment ideas, their impact on Marx's thought, and the 'counter-attack' they provoked (from Hegel amongst others). The contrast with Berlin's later views is sometimes striking.

This book is a general history of eighteenth-century developments in physical and life sciences.

A foundational moment in the history of modern European thought, the Enlightenment continues to be a reference point for philosophers, scholars and opinion-formers. To many it remains the inspiration of our commitments to the betterment of the human condition. To others, it represents the elevation of one set of European values to the world, many of whose peoples have quite different values. But what is the relationship between the historical Enlightenment and the idea of 'Enlightenment', and can these two understandings be reconciled? In this Very Short Introduction, John Robertson offers a concise historical introduction to the Enlightenment as an intellectual movement of eighteenth-century Europe. Discussing its intellectual achievements, he also explores how its supporters exploited new ways of communicating their ideas to a wider public, creating a new 'public sphere' for critical discussion of the moral, economic and political issues facing their societies. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

In his The Life and Theology of Alexander Knox David McCreedy presents an account of one of the most significant figures in nineteenth-century Anglicanism.

INSTANT NEW YORK TIMES BESTSELLER A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST'S BOOKS OF THE YEAR AND A PERFECT HOLIDAY GIFT "My new favorite book of all time." --Bill Gates If you think the world is coming to an end, think again: people are living longer, healthier, freer, and happier lives, and while our problems are formidable, the solutions lie in the Enlightenment ideal of using reason and science. Is the world really falling apart? Is the ideal of progress obsolete? In this elegant assessment of the human condition in the third millennium, cognitive scientist and public intellectual Steven Pinker urges us to step back from the gory headlines and prophecies of doom, which play to our psychological biases. Instead, follow the data: In seventy-five jaw-dropping graphs, Pinker shows that life, health, prosperity, safety, peace, knowledge, and happiness are on the rise, not just in the West, but worldwide. This progress is not the result of some cosmic force. It is a gift of the Enlightenment: the conviction that reason and science can enhance human flourishing. Far from being a naive hope, the Enlightenment, we now know, has worked. But more than ever, it needs a vigorous defense. The Enlightenment project swims against currents of human nature--tribalism, authoritarianism, demonization, magical thinking--which demagogues are all too willing to exploit. Many commentators, committed to political, religious, or romantic ideologies, fight a rearguard action against it. The result is a corrosive fatalism and a willingness to wreck the precious institutions of liberal democracy and global cooperation. With intellectual depth and literary flair, Enlightenment Now makes the case for reason, science, and humanism: the ideals we need to confront our problems and continue our progress.

A major intellectual history of the American Revolution and its influence on later revolutions in Europe and the Americas The Expanding Blaze is a sweeping history of how the American Revolution inspired revolutions throughout Europe and the Atlantic world in the eighteenth and nineteenth centuries. Jonathan Israel, one of the world's leading historians of the Enlightenment, shows how the radical ideas of the American founders set the pattern for democratic revolutions, movements, and constitutions in France, Britain, Ireland, the Netherlands, Belgium, Poland, Greece, Canada, Haiti, Brazil, and Spanish America. The book traces how American efforts to implement Radical Enlightenment ideas drove revolutions abroad, as foreign leaders followed the American example and espoused American democratic values. The first major new intellectual history of the age of democratic revolution in decades, The Expanding Blaze returns the American Revolution to its global context.

For thousands of years, people have used nature to justify their political, moral, and social judgments. Such appeals to the moral authority of nature are still very much with us today, as heated debates over genetically modified organisms and human cloning testify. The Moral Authority of Nature offers a wide-ranging account of how people have used nature to think about what counts as good, beautiful, just, or valuable. The eighteen essays cover a diverse array of topics, including the connection of cosmic and human orders in ancient Greece, medieval notions of sexual disorder, early modern contexts for categorizing individuals and judging acts as "against nature," race and the origin of humans, ecological economics, and radical feminism. The essays also range widely in time and place, from archaic Greece to early twentieth-century China, medieval Europe to contemporary America. Scholars from a wide variety of fields will welcome The Moral Authority of Nature, which provides the first sustained historical survey of its topic. Contributors: Danielle Allen, Joan Cadden, Lorraine Daston, Fa-ti Fan, Eckhardt Fuchs, Valentin Groebner, Abigail J. Lustig, Gregg Mitman, Michelle Murphy, Katharine Park, Matt Price, Robert N. Proctor, Helmut Puff, Robert J. Richards, Londa Schiebinger, Laura Stalkin, Julia Adeney Thomas, Fernando Vidal

This concise literary history of the American Enlightenment captures the varied and conflicting voices of religious and political conviction in the decades when the new nation was formed. Robert Ferguson's trenchant interpretation yields new understanding of this pivotal period for American culture.

A definitive contribution to scholarship on Adorno, bringing together the foremost experts in the field As one of the leading continental philosophers of the last century, and one of the pioneering members of the Frankfurt School, Theodor W. Adorno is the author of numerous influential—and at times quite radical—works on diverse topics in aesthetics, social theory, moral philosophy, and the history of modern philosophy, all of which concern the contradictions of modern society and its relation to human suffering and the human condition. Having authored substantial contributions to critical theory which contain searching critiques of the 'culture industry' and the 'identical thinking' of modern Western society, Adorno helped establish an interdisciplinary but philosophically rigorous study of culture and provided some of the most startling and revolutionary critiques of Western society to date. The Blackwell Companion to Adorno is the largest collection of essays by Adorno specialists ever gathered in a single volume. Part of the acclaimed Blackwell Companions to Philosophy series, this important contribution to the field explores Adorno's lasting impact on many sub-fields of philosophy. Seven sections, encompassing a diverse range of topics and perspectives, explore Adorno's intellectual foundations, his critiques of culture, his views on ethics and politics, and his analyses of history and domination. Provides new research and fresh perspectives on Adorno's views and writings Offers an authoritative, single-volume resource for Adorno scholarship Addresses renewed interest in Adorno's significance to contemporary questions in philosophy Presents over 40 essays written by international-recognized experts in the field A singular advancement in Adorno scholarship, the Companion to Adorno is an indispensable resource for Adorno specialists and anyone working in modern European philosophy, contemporary cultural criticism, social theory, German history, and aesthetics.

This Handbook re-examines the concept of early modern history in a European and global context. The term 'early modern' has been familiar, especially in Anglophone scholarship, for four decades and is securely established in teaching, research, and scholarly publishing. More recently, however, the unity implied in the notion has fragmented, while the usefulness and even the validity of the term, and the historical periodisation which it incorporates, have been questioned. The Oxford Handbook of Early Modern European History, 1350-1750 provides an account of the development of the subjectduring the past half-century, but primarily offers an integrated and comprehensive survey of present knowledge, together with some suggestions as to how the field is developing. It aims both to interrogate the notion of "early modernity" itself and to survey early modern Europe as an establishedfield of study. The overriding aim will be to establish that "early modern" is not simply a chronological label but possesses a substantive integrity.Volume II is devoted to "Cultures and Power", opening with chapters on philosophy, science, art and architecture, music, and the Enlightenment. Subsequent sections examine "Europe beyond Europe", with the transformation of contact with other continents during the first global age, and military andpolitical developments, notably the expansion of state power.
