Theory Model: Collision Theory In the picture below, the baseball bat represents Reactant A and the baseball represents Reactant B A reaction will only be successful if the batter hits a homerun. If the batter does not hit a homerun, the reaction will be considered a failure. Now, read the four scenarios below and answer the key questions that follow

Scenario 1: The pitcher throws a fastball down the middle of the plate.

combine to form hydrogen iodide gas, as shown in the equation $H_2 + I_2 \rightarrow 2 HI$.

Collision Theory pogil questions - Collision Theory Key ...

The collision theory states that a chemical reaction can only occur between particles when they collide (hit each other). The collision between reactant particles is necessary but not sufficient for a reaction to take place. The collisions also have to be effective. It is important to understand the exact nature of an effective collision since this determines whether or not particles actually react with each other and form new products.

Collision Theory Pogil

Basically explains how reactions occur and why different reactions have different reaction rates. It states that: Molecules must collide in order to react. In order to effectively initiate a reaction, the molecules in the collisions must have sufficient energy to bring about disruptions in the bonds of molecules.

Collision Theory of Chemical Reactions: Explanation ...
