Atoms that let
current flow
easily are
called
conductors,
whereas atoms
that don't let

easily are
called
insulators. An
electric circuit

is a closed loop made of conductors and other electrical elements through which electric current can flow. For example, a very simple electrical circuit consists of three elements: a

A simple electric circuit is shown in Fig. 1.1. It consists of three basic elements: a battery, a lamp, and connecting wires. Such a simple circuit can exist by itself; it has several
