Theoretical Foundation Engineering provides up-to-date, state-of-the-art reviews of the existing literature on lateral earth pressure, sheet pile walls, ultimate bearing capacity of shallow foundations, holding capacity of plate and helical anchors in sand and clay, and slope stability analysis. The discussion of the ultimate bearing capacity of shallow foundations is the most comprehensive presentation on the subject to be found anywhere, and the review of earth anchors is unique to this book. In addition, each chapter includes several topics which have never appeared in any other book. The treatment is primarily theoretical and does not in any way compete with existing foundation design books. This is the only textbook of its kind. Not only will it be welcomed by teachers and first-year graduate students of geotechnical engineering, but it will be a useful reference for graduate students and consultants in the the field, as well as being a valuable addition to any civil engineering library.

This junior-level electronics text provides a foundation for analyzing and designing analog and digital electronic circuits. Computer analysis and design are recognized as significant factors in electronics throughout the book. The use of computer tools is presented carefully, alongside the important hand analysis and calculations. The author, Don Neamen, has many years experience as an engineering educator and an engineer. His experience shines through each chapter of the book, rich with realistic examples and practical rules of thumb. The book is divided into three parts. Part 1 covers semiconductor devices and basic circuit applications. Part 2 covers more advanced topics in analog electronics, and Part 3 considers digital electronic circuits.

This meticulously and playfully written work captures the self-growth journey of a young pastor's kid into an enlarged territory of self-actualization and wholeness. A lot of times when we've been through the mud, we crawled out of the situation only to clean ourselves up and forget what it's like to wreak of the scent of our past, but this work captivates the essence of adolescent crisis and temptation. More importantly it illuminates the love and empowerment of God along with family leaving a lesson that teaches the importance of transparency and testimony.

The amazing work of a tormented soul Vincent van Gogh's story is one of the most ironic in art history. He lived an unhappy and difficult life during which his work received almost no appreciation—finally killing himself by a bullet to the chest, so great was his despair—and is now widely considered one of the most important painters of all time, his works fetching record prices of tens of millions of dollars at auction. This comprehensive study of Vincent Van Gogh (1853–1890) represents a rarity in art history: a detailed monograph on his life and art combined with a complete catalogue of his 871 paintings. These volumes also reproduce most of Van Gogh's paintings in color.

Demokratieförderung ist zentraler Bestandteil der Politik der EU gegenüber dem Südkaukasus und Zentralasien. Das deutsch-georgisch-usbekische Autorengespann gibt in diesem Buch Antwort auf die folgenden vier Fragen: Mit welchen Instrumenten und auf welche Art fördert die EU die Demokratie in den Staaten des Südkaukasus und in Zentralasien? Wie kann die gewählte Vorgehensweise bei der Demokratieförderung erklärt werden? Welche Wirkung hat die Demokratieförderung der EU? Wie kann diese Wirkung erklärt werden? Zur Beantwortung der Fragen werden, anders als in bisher vorliegenden Studien, sämtliche Aktivitäten der EU im Bereich der Demokratieförderung einbezogen. Die Analyse basiert zudem auf einer Vielzahl von Interviews und Daten, die von dem Autorengespann in Brüssel, wie auch im Südkaukasus und Zentralasien durchgeführt bzw. erhoben wurden. Mit Beiträgen von Michèle Knodt, Ghia Nodia, Vladimir Paramonov, Sigita Urdze
