Explores the appearance, characteristics, and behavior of protists and fungi, lifeforms which are neither plants nor animals, using specific examples such as algae, mold, and mushrooms.

Suffering from chronic illness and unable to get satisfactory results from doctors, husband and wife scientists Paul and Shou-Ching Jaminet took an intensely personal interest in health and nutrition. They embarked on five years of rigorous research. What they found changed their lives— and the lives of thousands of their readers. In Perfect Health Diet, the Jaminets explain in layman's terms how anyone can regain health and lose weight by optimizing nutrition, detoxifying the diet, and supporting healthy immune function. They show how toxic, nutrient-poor diets sabotage health, and how on a healthy diet, diseases often spontaneously resolve. Perfect Health Diet tells you exactly how to optimize health and make weight loss effortless with a clear, balanced, and scientifically proven plan to change the way you eat—and feel—forever!

Mark Wells is a young man who has a great job, an even better friend, and a wonderful future ahead of him. He is also a klutz, but even he never expected to literally stumble into another world where he has four hooves, two wings, and a green fur coat. Now, the former human has to learn how to be a pony even as he seeks a way home. Maybe the Great & Powerful Princess Trixie can help him? Then again, it seems she might need his help even more! Follow Mark and his misadventures in a world of monsters and magical ponies as he tries his best to cope while being thrust into a role he had never dreamed of playing - hero.

This volume provides basic and advanced protocols on somatic cell nuclear transfer, induced pluripotent stem cells, and direct reprogramming of somatic cells into different functional cells. Chapters guide readers through methods on standardized procedures for characterization of induced pluripotent stem cells, as well as those for preparation of materials required for induction of pluripotent stem cells. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge,

Nuclear Reprogramming: Methods and Protocols aims to ensure successful results in the further study of this vital field.

Legendary grower Ed Rosenthal shares his knowledge and experience on every portion of the marijuana plant's life cycle, giving advice from seed selection to harvesting. Includes information on growth rate, lighting, CO<sub>2</sub>, temperature, nutrients, water and sexing plants. With a colour photo section, index, bibliography, tables and charts.

Proceedings of IAU Symposium 229 on minor bodies of the solar system, for researchers and graduate students of planetary sciences.

Cell to Cell Signalling: From Experiments to Theoretical Models is a collection of papers from a NATO Workshop conducted in Belgium in September 1988. The book discusses nerve cells and neural networks involved in signal transfers. The works of Hodgkin and Huxley presents a prototypic combination between experimental and theoretical approaches. The book discusses the coupling process found between secretory cells that modify their behavior. The text also analyzes morphogenesis and development, and then emphasizes the pattern formation found in *Drosophila* and in the amphibian embryo. The text also cite examples of immunological modeling that is related to the dynamics of immune networks based on idiotypic regulation. One paper analyzes the immune dynamism of HIV infection. The text notes that hormone signaling can be attributed as responsible for intercellular communication. Another paper examines how the dominant follicle in the ovarian cycle is selected, as well as the effectiveness of hormone secretion responsible for encoding the frequency of occurrence of periodic signals. The book also discusses heart signal sources such as cardiac dynamics and the response of periodically excited cardiac cells. The text can prove valuable for practioners in the field of neurology and cardiovascular medicine, and for researchers in molecular biology and molecular chemistry.

The Blood Gorgons, a Chaos Space Marine warband, fight the threat from Nurgle-infected foes on the planet of Hauts Bassiq. The Blood Gorgons Chaos Space Marines are called to one of their recruiting worlds as the populace is struck down by a plague of mutation. But the expeditionary force is decimated by a mysterious foe, and Sargaul is one of few survivors. The polluted world has become even more nightmarish than before, and Sargaul faces insurmountable odds if he is to save the savage planet. Facing a hostile environment, shadowy xenos enemies and treachery from within his own forces, Sargaul must dig deep into his hatred and determination to leave Haute Bassiq alive.

Plant tissue culture (PTC) is basic to all plant biotechnologies and is an exciting area of basic and applied sciences with considerable scope for further research. PTC is also the best approach to demonstrate the totipotency of plant cells, and to exploit it for numerous practical applications. It offers technologies for crop improvement (Haploid and Triploid production, In Vitro Fertilization, Hybrid Embryo Rescue, Variant Selection), clonal propagation (Micropropagation), virus elimination (Shoot Tip Culture), germplasm conservation, production of industrial phytochemicals, and regeneration of plants from genetically manipulated cells by recombinant DNA technology (Genetic Engineering) or cell fusion (Somatic Hybridization and Cybridization). Considerable work is being done to understand the physiology and genetics of in vitro embryogenesis and organogenesis using model systems, especially *Arabidopsis* and carrot, which is likely to enhance the efficiency of in vitro regeneration protocols. All these aspects are covered extensively in the present book. Since the first book on Plant Tissue Culture by Prof. P.R. White in 1943, several volumes describing different aspects of PTC have been published. Most of these are compilation of invited articles by different experts or proceedings of conferences. More recently, a number of books describing the Methods and Protocols for one or more techniques of PTC have been published which should serve as useful laboratory manuals. The impetus for writing this book was to make available a complete and up-to-date text covering all basic and applied aspects of PTC for the students and early-career researchers of plant sciences and plant / agricultural biotechnology. The book comprises of nineteen chapters profusely illustrated with self-explanatory illustrations. Most of the chapters include well-tested protocols and relevant media compositions that should be helpful in conducting laboratory experiments. For those interested in further details, Suggested Further Reading is given at the end of each chapter, and a Subject and Plant Index is provided at the end of the book.
