Interest in humor has grown in recent years, especially in relation to its clinical applications. Humor helps relax, improve relationships with others, and reduce negative emotions such as anger. A person who suffers from psychological distress, can learn to open up to others through humor, to complain less, and to transform her mood in a positive way and find constructive solutions to her problems. Mix therapeutic action can help with humor change and improve the management of several diseases (both somatic and mental). Therefore, humor can play a vital role in promoting general and mental well-being. It may seem difficult to measure the health benefits of laughter, but a number of scientific studies done in a clinical setting support the benefits of humor therapy. The aim of this book is to show how humor can become a valuable tool for working in health professions.

Offering a social scientific look at humor's role in medical transactions, this volume is based on extensive field study in seven medical settings. It includes excerpts from dozens of actual conversations between patients and caregivers. Analysis of these episodes reveals that humor is a practical tool used to meet many medical objectives. It is used by patients to good-naturedly complain and to campaign for more personal attention, and by caregivers to get attention, make amends, insist on unpleasant routines, and establish rapport. Examining humor from many angles, the book begins with a phenomenological analysis of the essence of funny. This section describes what makes some things funny but not others, and how to distinguish between potentially funny and unfunny episodes in medical situations. From an ethnographic perspective, joking around is shown to be a persuasive element of medical culture. Examples illustrate how patients and caregivers use humor to negotiate the dialectics between helping and hurting, and individuality and compliance. Additionally, a close-up look at three medical transactions shows how humor is used to help a physical therapy patient overcome fear and queasiness, reduce the embarrassment of a mammography, and defuse a potential conflict between a student aide and a young patient. A final section examines techniques for initiating conversational humor. In sum, this volume provides an

intimate and realistic look at medical conversations as they are conducted every day. It serves as a valuable complement to health communication texts and offers information of interest to health communication scholars, healthcare practitioners, and anyone interested in the effects and techniques of conversational humor. Richly grounded in naturally occurring data, the book can be understood and used effectively by both scholars and practitioners.

Humor and Aging deals with humor throughout the life span, although primary attention is given to humor about and by the elderly. The book contains theoretical and review material from infancy to old age and includes empirical studies of death and dying in both our own and other societies. The book is divided into four parts. Part I considers theoretical models of humor development across the life span and discusses physiological, psychological, and sociological processes. Part II deals with ways of considering humor and aging from different vantage points. These include (1) humor about people of different ages; (2) humor for people of different ages; and (3) humor by people of different ages. Part III addresses the grim subject of death and dying and how it lends itself to humorous treatment in our own and other societies. Part IV contains brief empirical reports. Since scientific research in humor and aging is only beginning, it seems important to discuss pilot work in hopes that others will follow. Finally, an epilogue by Loeb and Wood presents a compelling theoretical approach.

A comprehensive collection of classic and contemporary readings in the sociology of health. The Sociology of Healthcare will stimulate debate, reflexive practice and critical thinking in applied sociology and is aimed at the teaching and learning needs of both lecturers and students.
