A particular circuit element is available in three grades. Grade A guarantees that the element can safely absorb 1/2W continuously. Similarly, Grade B guarantees that 1/4W can be absorbed safely, and Grade C guarantees that 1/8W can be absorbed safely. As a rule, elements that can safely absorb more power are also more expensive and bulkier.

The Electric Current in a circuit flows from positive to negative while electrons flow from negative to positive. So when the switch is on the path is complete and electricity passes through enabling the bulb to light up, while when the switch is not on, there is a break in the flow of electricity and the bulb does not light up.
