[DOC] Protein Synthesis Worksheet Part C Answers

Online Library Protein Synthesis Worksheet Part

Protein synthesis is the process used by the body to make proteins. The first step of protein synthesis is called Transcription. It occurs in the nucleus. During transcription, mRNA transcribes (copies) DNA. DNA is "unzipped" and the mRNA strand copies a strand of DNA. Once it does this, mRNA leaves the nucleus and

The first step of protein synthesis is called
Transcription. It occurs in the nucleus.
During transcription, mRNA transcribes

Online Library Protein Synthesis Worksheet Part

(copies) DNA. DNA is "unzipped" and the mRNA strand copies a strand of DNA. Once it does this, mRNA leaves the nucleus and goes into the cytoplasm. mRNA will then attach itself to a ribosome.

PROTEIN SYNTHESIS WORKSHEET -

Online Library Protein Synthesis Worksheet Part

Hartland High School

Protein Synthesis. Protein synthesis is one of the most fundamental biological processes by which individual cells build their specific proteins. Within the process are involved both DNA (deoxyribonucleic acid) and different in their function ribonucleic acids (RNA). The process is

Online Library Protein Synthesis Worksheet Part

initiated in the cell's nucleus, where specific enzymes unwind the needed section of DNA, which makes the DNA in this region accessible and a RNA copy can be made.
