Physics Q&A Library In the figure here, a red car and a green car move toward each other in adjacent lanes and parallel to an x axis. At time $t = 0$, the red car is at $x_r = 0$ and the green car is at $x_g = 216$ m. If the red car has a constant velocity of 28.0 km/h, the cars pass each other at $x = 44.2$ m.

Islington Green is only a short walk from Angel tube station. There are plenty of places nearby to get something to eat. The green itself is a very nice place to sit and relax. Have something to eat or drink and also to read. There is also a very unique war memorial. If you need to unwind and you are in the area I would recommend a visit. ...

~~Red Car And Green Car High Resolution Stock Photography ...~~

Let the Blue car be $\text{£}x$. The red car would then be $\text{Blue} + \text{£}5000$. Yellow is the same as Blue, so Yellow cost $\text{£}x$. Green cost twice as much as Blue so Green cost $\text{£}2x$. Green car is the same as Red car so we can write Green car = Red car $2x = x + \text{£}5000$. solving this equation by the elimination method we have $2x - x = x - x + \text{£}5000$ which gives $x = \text{£}5000$ So Blue car costs $\text{£}5000$ Yellow Car costs $\text{£}5000$ Green car costs $\text{£}10000$ Red car costs $\text{£}10000$. Jonny,

Thankfully in Britain unlike in USA a red car doesn't attract any attention of the wrong kind or even insurance loading, in USA most companies where the car is red or black would charge a higher premium if you're a younger driver. It also tends to attract the attention of the police where they think you'll be more likely to commit an offence.
