A relief valve or pressure relief valve (PRV) is a type of safety valve used to control or limit the pressure in a system; pressure might otherwise build up and create a process upset, instrument or equipment failure, or fire. The pressure is relieved by allowing the pressurized fluid to flow from an auxiliary passage out of the system. The relief valve is designed or set to open at a

The P1000AXL-150C Pressure Relief Valve is The P1000AXL-150C Pressure Relief Valve is set at 150 psi and utilized on water heating storage vessels for protection against over-temperature or excessive pressure (not for steam service). Primarily used on storage tanks, P1000AXL materials include cast brass or bronze for the main valve body, quality stainless steel 300 series internals, stainless steel springs, and FDA approved, epoxy-coated copper tube probes.

## **Natural gas relief valve caused noise, 'tremor' felt**

...

A Relief Valve is a pressure relief device actuated by inlet static pressure having a gradual lift generally proportional to the increase in pressure over opening pressure. It may be provided with an enclosed spring housing suitable for closed discharge system application and is primarily used for liquid service.
