nutritious fodder will result in higher milk yield in dairy animals. Cost control can be achieved by growing green fodder in the hydroponic system which leads to profitable and successful dairy farming.

*Hydroponic Green Fodder Production Guide / Agri Farming*

Some argue that hydroponic production is more water use-efficient than conventional agricultural systems. However, since there is a net loss of energy and dry matter (DM) or mass from the system until at least 10 days, that argument falls flat because water use

# Download File PDF Review Of Hydroponic Fodder Production For Beef Cattle

efficiency is calculated by the mass of forage produced divided by the mass of water used.

*Hydroponic forage system: Too good to be true*

...

Hydroponics fodder can be grown in low cost greenhouses with locally available grains. Production of hydroponics fodder in low cost greenhouses is an effective solution for fodder scarcity and is a very promising technology for sustainable livestock production in different regions of India. Green fodders are staple feed for dairy

# Download File PDF Review Of Hydroponic Fodder Production For Beef Cattle

animals.

## *HYDROPONICS GREEN FODDER FEEDING TECHNOLOGY*

Commercial hydroponic fodder companies report one major advantage to be that 1kg of grain can be converted into 6-9 kg of sprouts, citing this as a multiplier of benefit over cost. However, the majority of the increase in weight is water, and there is an increased manual handling burden to moving the water laden sprouts.
