Visual Basic 6 Win32 API
Tutorial Visual Basic does
an excellent job of letting
developers build
sophisticated Windows
applications in a relatively
short amount of time. This
allows one to quickly build

prototypes for end-users to evaluate and test, which can accelerate the development cycle. However, this ease of use does have its disadvantages.

Visual Basic automatically
converts the data types of
parameters and return values
for Windows API calls, but
you can use the MarshalAs
attribute to explicitly
specify unmanaged data types

that an API expects. For more information about interop marshaling, see Interop Marshaling. To use Declare and MarshalAs in an API call
